**Applicant Initiated Interview Request Form**

Application No.: 10/803,520 First Named Applicant: Andrew Fraser  
 Examiner: Olubusola Omosewo Art Unit: 2168 Status of Application: Pending

**Tentative Participants:**

(1) Darin J. Gibby (2) \_\_\_\_\_

Proposed Date of Interview: June 12, 2008 Proposed Time: 11:00 AM (AM/PM)

**Type of Interview Requested:**

(1) ☐ Telephonic (2) ☒ Personal (3) ☐ Video Conference

Exhibit To Be Shown or Demonstrated: ☐ YES ☐ NO

If yes, provide brief description: \_\_\_\_\_

**Issues To Be Discussed**

Issues (Rej., Obj., etc.)	Claims Fig. #s	Prior Art	Discussed	Agreed	Not Agreed
(1) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(2) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(3) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(4) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Continuation Sheet Attached					

**Brief Description of Arguments to be Presented:**

Please see the attached presentation.

An interview was conducted on the above-identified application on \_\_\_\_\_.

**NOTE:** This form should be completed by applicant and submitted to the examiner in advance of the interview (see MPEP § 713.01).

This application will not be delayed from issue because applicant's failure to submit a written record of this interview. Therefore, applicant is advised to file a statement of the substance of this interview (37 CFR 1.133(b)) as soon as possible.

**Overview of Data Capture Interface**

## Example Walkthrough with the MyTravel 'Holiday Matchmaker' demonstrating:

- Use of prompts and bipolar construct scales based on underpinning psychological theory (Personal Construct Theory)
- Use of 'micro-grids' embodied in an example implementation of the data capture interface
- Rendering of data from user rankings on bipolar scales to allow grouping of individuals, resulting in ability to report holiday destinations recommended by people who think about - construe - holidays in a similar way.

## Summary reference points from application

- [0012] Typically, each construct includes two distinct descriptive terms relating to things provided to customers by operators of the system. These should be perceived by the user as opposite extremes of a range of opinions about a thing. Therefore, the descriptive terms of each construct may represent contrasting opinions of the thing. A system embodying the invention typically obtains data from a user that represents a user's opinion of the thing in a range defined by the descriptive terms.
- [0013] In typical embodiments, the construct is represented by visual control displayed in a graphical user interface on a computer screen. In such cases, the user can input a value representative of their opinion by adjustment of the position of the control. This provides visual feedback to the user of the value that they wish to input.
- [0014] The results of the analysis may be used to provide deduce which items of information will be of interest to a particular customer.
- [0015] In a typical configuration, a data management system according to any preceding claim executes on a server that communicates with a user over a network link, which will typically include the Internet. Such a system usually includes a user data input component that executes in on a remote host system. For example, the data input component may be represented in the display generated by a web browser. To further increase the versatility of the system, the data input component may be generated by an applet that is downloaded to the remote host from the server.

## Introductory screen

The MyTravel Holiday Matchmaker is a fun way to find holiday destinations based on suggestions from like-minded people.

The idea is that you complete our fun little 'puzzle' - it really isn't like other surveys!

To do this just follow the instructions as you go. It should take you only a few minutes to complete and at the end you get a bunch of suggested destinations tailored to match your profile, in different categories to help you decide.

Give it a go, the results may surprise you!

Highly rated by like-minded people					
1	Florida	2	Spain	3	Turkey
4	Maldives	5	Japan	6	USA (except)
7	South Africa	8	France	9	Italy
10	Thailand	11	India	12	China
Show page 1 2 3 4 5 6 7 8 9 10 11 12					
Recommended by Everybody					
1	France	2	Spain	3	Italy
4	Japan	5	USA (except)	6	China
7	India	8	Thailand	9	Maldives
10	South Africa	11	Japan	12	France

\* Results are presented in an easy-to-use page, like the one shown in the picture above, that allows you to see our top recommendations from people who think like you.

This is a real implementation on a well-known holiday site in the UK.

The introductory screen introduces a 'puzzle' interface which is intended to be both fun and thought-provoking for the end-user.

There is a screen grab from the results screen to entice the user to reach the end of the puzzle and get the 'reward' of recommendations from like-minded travellers.

**SYNATURE**

# Capturing demographics

Please answer these background questions before we start.

Are you

Your age range

I mostly take holidays for

On average, how many holidays do you take per year?

We capture demographic data so that we can look at influences and patterns at a later time.

This is NOT part of Personal Construct Theory technique per se, but rather useful data points for multivariate analysis such as described in the influence modelling analysis or indeed the pattern recognition analysis.

Mood setting..

**my travel** **Holiday Matchmaker** **Holidays**

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

Choose an appealing image to match

Have a match!

This screen is really just used for scene setting.

We wish the user to get into the 'frame of mind' where their construal about holiday destinations will be more readily available to them.

We do this by scene setting with pictures, and then presenting thought-provoking prompts about holidays.

Note we also show a completion bar on the bottom of the screen.

SYNATURE

## Presenting a user with the first prompt (element)

This is the first step in the presentation of a 'micro-grid' puzzle. We are

going to take the user through a repertory grid that is pre-supplied with both elements and constructs.

The purpose of this is to ensure that we can analyse like-for-like grid structures.

The user is here presented with the first prompt, or 'element' (a brilliant place they have been to on holiday).

SYNATURE

## Presenting the user with pre-supplied constructs

**MY TRAVEL VACATION** Holiday Matchmaker Holidays

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

Weather most important	Location and activity most important
Interesting	Beautiful
For people without kids	For family

Select phrases associated with the brilliant place to go

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100

This is the second step in the presentation of a 'micro-grid' puzzle. We ask the user to choose from a selection of available bi-polar constructs which have been selected following qualitative and quantitative research.

Bi-polar constructs are the key to 'personal construct theory'.

We record which construct the user chooses first, and when they have clicked on that they are asked to assess the relative importance of each pole to them in the context of the memory of their brilliant holiday destination.

DEPARTMENT OF  
SYNATURE

## Adjustment of visual control to signify opinion

**MY TRAVEL** Holiday Matchmaker Holidays

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

Now move the slider to show what you think your brilliant holiday destination would come out this year.

Beautiful

Interesting

Confusion

U.S. Census Bureau

In this third step we ask the user to adjust the visual control (in this case a slider) so that it ends up at a place between the two poles (interesting<->beautiful) that represents the user's view of the brilliant place they are thinking about.

The scale is currently a 100-point scale.

In this embodiment, the words 'interesting' and 'beautiful' get bigger or smaller depending on the relative weighting given by the user, thereby giving additional visual feedback as to their opinion.

## Selection of remaining construct pairs

**MY TRAVEL** **Holiday Matchmaker** **Holidays**

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

Weather most important	Select a mother phrase associated with that brilliant place to go	Location and activity most important
For people without kids		For family

© 2008 SYNATURE

The next steps are for the user to choose from the remaining construct choices (all have to be ranked in order to proceed to the next prompt ('element')).

So another 2 construct rankings will be carried out by the user in the same way as the slider visual control was moved in the previous slide.

The next prompt...

**MY TRAVEL**  
HOLIDAYS

**Holiday Matchmaker**  
**Holidays**

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

Think of a Holiday destination you have not been to and would love to go to because it's your dream holiday destination

Present

In this application we have a second 'element' or prompt which will be shown to the user. *This is actually the first element of a new micro-grid, but the user need not be aware of this.*

Elements exist to prompt the user about an experience or scenario or feeling that is useful for eliciting constructs. They can be hypothetical, like this one 'your dream holiday'.

We are again using a pre-supplied element and will again pre-supply the constructs to come. These are very small ('micro') repertory grids as a result.

SYNATURE

## And the next set of constructs and micro-grid...

**MY TRAVEL** Holiday-Matchmaker Holidays

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

I'd go for the natural surroundings	I'd go for the beach and the sun	I'd enjoy the restaurants and bars	I'd organise things myself
I'd walk around seeing things	I'd like a place that's different from what I'm used to		

Trips and entertainment organised

As before, we ask the user to choose from a limited supply of constructs.

Note that these constructs are different because we are now completing a second micro-grid of 1 element X 3 constructs.

We can analyse multiple grids.

Created by  
**SYNATURE**

And the visual control method again...

As before, the user opines about the relative weighting of the construct in relation to the prompt (this time their 'dream holiday').

## Further construct choices to complete micro-grid

**MY TRAVEL** **Holiday Matchmaker** **Holidays**

As the second part of the survey, please try the puzzle on the right. It should only take a few minutes.

When you're done with the puzzle, we'll show the destinations we think people like you would prefer.

I'd go for the natural surroundings	I'd go for the beach and the sun	I'd organise things myself
Select an initial phrase associated with that destination		
Trips and entertainment organised		

Return to puzzle

As in the previous micro-grid, the user has to select and rank each of the 3 constructs provided in order to complete the puzzle.

SYNATURE

Invite the user to finish, and thank them

The user has now completed the two micro-grids we have asked them to go through.

The background analysis of the data will begin on clicking 'Finish'.

Specifically, we will use our data rendering techniques to assign individual 'psychological scores' ('mesh values' in the patent application) to users and then group them according to proximity of values.

SYNATURE

## Results/recommendations from people who think like you about holidays...

From your answers to the puzzle we've found hundreds of like-minded people - these are their top holiday suggestions in various categories.

Click on the destination to see the MyTravel destination guide in a separate window, and click on the categories to see more recommendations.

Click here to email a friend and tell them about the Matchmaker.

Something Quirky	Dream Holidays
3 to 5 hours away	Far and Away
Nice and Near	Young and Lively
Families	Couples

★ Indicates suggestions highly recommended by like-minded people.

Indicates suggestions highly recommended by people not like you.

Show page: 1 2 3 4 5 Next

The user is then presented with the Recommendations from like-minded people who were asked during our research their 'essential', 'quirky', 'dream' destinations.

We also provided other categories of holiday based on flight duration and the type of people recommending those places (those preferring family, young and lively, or couples).

The key is that the top list is filtered by like-minded people's recommendations and is not the same as the average recommendations provided on a non-personalised (aggregate) way.

Clicking on a recommendation takes you to the detail of that holiday destination...

Whatever you've heard about Las Vegas, the city will still surprise you! Las Vegas is incredibly the gaming capital of the world, but it has so much more to offer. Including world-class entertainment, a varied range of shops and boutiques, and natural wonders such as the Grand Canyon, all of which are within easy reach. Where else but on the amazing 'Strip' could you stroll from the land of the Pharaohs to the fairy tale towers of Camelot and the big top of a giant circus. Suspend disbelief and enjoy the 24-hour buzz of this amazing place!

**CASINOS** The casinos of Las Vegas need little introduction but, these days, the city is so much more than the greatest gambling centre on the globe! Live entertainment covers everything from spectacular shows to world class nightclub and white knuckle rides. There are half-a-dozen entertainment venues of the city. The highlight is the MGM Grand, the most famous of all the world's casinos. There's a huge

**UK's widest range of wireless networking devices to take home today**

This is the part of MyTravel's site which shows the detail of Las Vegas (the top recommended destination from people who thought like the user that just completed the micro-grid puzzle).

The user has selected Las Vegas because it is a more powerful recommendation - based on the experience, reflection and thinking of others who show similar construal about holidays - than a recommendation which is based on an averaged, non-personal recommendation - 'most popular'.

We can now, should we so wish, look at the outcome of the recommendation (clickthrough, conversion to purchase, etc) and begin our influence modelling step.
